# Page.pdf() method

Generates a PDF of the page with the `print` CSS media type.

## Signature:

```
class Page {  
  abstract pdf(options?: PDFOptions): Promise<Buffer>;  
}
```

## Parameters

Parameter	Type	Description
options	PDFOptions	(Optional) options for generating the PDF.

## Returns:

Promise<Buffer>

## Remarks

To generate a PDF with the `screen` media type, call `page.emulateMediaType('screen')` before calling `page.pdf()`.

By default, `page.pdf()` generates a pdf with modified colors for printing. Use the `-webkit-print-color-adjust` property to force rendering of exact colors.
